### Do now using like terms

#### Write this in your book

WALT - Multiply algebraic terms

**Success Criteria** - To multiply algebraic terms I know I need to multiply numbers and multiply the numerals By taking the following steps

- 1. Leave or remove the multiplication sign between the pronumerals or variables
- 2. Remove the multiplication sign between the numbers and variables (coefficient and variable)
- 3. Separate numbers and variables and arrange them number first and then variable (group them together)
- 4. Multiply the numbers and then write the variables in alphabetical order

### **Checking your understanding**

- 1 Are the following true (T) or false (F)?
  - a  $3 \times a$  can be written as 3a.
  - **b**  $k \times 5$  can be written as 5k.
  - c 2x is short for 2 + x.
  - **d** 4ab could also be written as  $4a \div b$ .
  - e  $q \times q$  can be written as  $q^2$ .

```
EXAMPLE 1
Simplify the following.
\mathbf{a} \quad p \times s
                      b p \times p
                                             c 3p \times s
                                                                   d 5 \times 2k
                                                                                                                  f 4pq \times 3ps
                                                                                            e 3p \times 2s
p \times s = ps
                                           (leave out the multiplication sign between the pronumerals)
 b \quad p \times p = pp \text{ or } p^2 
c 3p \times s = 3 \times p \times s = 3ps
                                           (leave out the multiplication sign between the numbers and pronumerals)
\mathbf{d} \quad 5 \times 2k = 5 \times 2 \times k
                                           (split into numerical and pronumeral parts)
             = 10 \times k = 10k
e 3p \times 2s = 3 \times p \times 2 \times s
                                          (split into numerical and pronumeral parts)
                                          (group the numbers together and the pronumerals together)
               = 3 \times 2 \times p \times s
               = 6 \times p_S = 6p_S
\mathbf{f} \quad 4pq \times 3ps = 4 \times p \times q \times 3 \times p \times s
                                                        (split into numerical and pronumeral parts)
                  = 4 \times 3 \times p \times q \times p \times s
                                                        (group the numbers and pronumerals together)
                  = 4 \times 3 \times p \times p \times q \times s
                  = 12 \times p^2 qs = 12p^2 qs
```

- 1 Complete the following to simplify.
  - $\mathbf{a} \quad 5t \times w = \underline{\qquad} \times \underline{\qquad} \times w = \underline{\qquad}$
  - c  $7y \times 2 = \underline{\hspace{1cm}} \times y \times \underline{\hspace{1cm}}$ = \_\_\_ × \_\_\_ × y = \_\_\_
  - e  $2ab \times 3a = \underline{\hspace{1cm}} \times a \times b \times \underline{\hspace{1cm}} \times a$
  - =  $\underline{\hspace{1cm}}$   $\times$   $\underline{\hspace{1cm}}$   $\times$  a  $\times$  a  $\times$  b =  $\underline{\hspace{1cm}}$
- **2** Simplify the following.
  - a  $4x \times y$
- b  $3k \times m$ 
  - f  $6 \times 10p$
- d  $4 \times 7w$

=  $\underline{\hspace{1cm}}$   $\times$   $\underline{\hspace{1cm}}$   $\times$   $p^2$   $\times$  q =  $\underline{\hspace{1cm}}$ 

- e  $5 \times 4k$

 $\mathbf{c} \quad x \times 5y$ 

h  $6z \times 3$ 

- $i \quad 3m \times 4n$
- $\begin{array}{ll}
  \mathbf{g} & 2x \times 8 \\
  \mathbf{k} & 4p^2 \times 7q
  \end{array}$

- $\mathbf{m} 4ab \times 5c$

- $\mathbf{q} \quad 2 \times 3a \times 4b$
- j
    $6v \times 2w$  k
    $4p^2 \times 7q$  l
    $5a \times 6b^2$  

   n
    $3xz \times 6xy$  o
    $10pq \times 2qr$  p
    $5bc \times 7bc$  

   r
    $2a \times 3b \times 4c$  s
    $4p \times 5q \times 2r$  t
    $3a \times 4a \times 3c$

# EXAMPLE 2

#### Simplify the following.

- $a 5 \times 3t$
- b  $-2m \times -3n$

Remember: When multiplying two integers: If the signs are the same, the answer is positive.  $\blacksquare$  .... If the signs are different, the answer is negative.

 $\mathbf{a} - 5 \times 3t = -5 \times 3 \times t$ = -15t

b  $-2m \times -3n = -2 \times m \times -3 \times n$  $= -2 \times -3 \times m \times n$ 

**b**  $4 \times 3m = 4 \times \_\_ \times \_\_ = \_\_$ 

d  $3p^2 \times 7q = \underline{\hspace{1cm}} \times p^2 \times \underline{\hspace{1cm}} \times q$ 

=6mn

- **3** Simplify the following.

  - $\mathbf{a} \quad -2 \times 5x \qquad \qquad \mathbf{b} \quad -5 \times 4y$
- $\mathbf{c} -6 \times -2w$
- d  $-4 \times -8z$

- $e 4 \times -3m$
- f  $10 \times -8p$
- $g -3m \times 2n$
- h  $4a \times -5b$

- $\mathbf{i} -6x \times -2y$  $\mathbf{m} -2p \times -5p$
- $\mathbf{j} -9s \times -2t$  $\mathbf{n} \quad 4mn \times -2mp$
- $\mathbf{k} -4p^2 \times 6q$ 0  $-5abc \times -6b$
- $1 -5a \times 8a$  $p -7mn \times 4kn$

## Multiplying terms with squares

Simplify $3xy \times 5xz$ .								
Solution	Explanation							
$3xy \times 5xz = 3 \times x \times y \times 5 \times x \times z$ $= 3 \times 5 \times x \times x \times y \times z$ $= 15x^{2}yz$	Write the expression with multiplication signs and bring the numbers to the front.							
= 13x yz	Simplify, remembering that $x \times x = x^2$ .							

Simplify the following.

- $\mathbf{a} \quad x \times x$

- d  $5d \times 2d \times e$

- g  $4xy \times 2xz$

- $9ab \times 2a$
- b
    $a \times a$  c
    $3d \times d$  

   e
    $7x \times 2y \times x$  f
    $5xy \times 2x$  

   h
    $4abc \times 2abd$  i
    $12xy \times 4x$  

   k
    $3xy \times 2x \times 4y$  l
    $2ab \times 4a \times 3b$

Write each expression without a division sign.

- **a**  $k \div 4$  **b**  $x \div 5$

- **d**  $3k \div 10$

- **e** 5 ÷ a
- $f \quad a \div b$
- c  $2q \div 5$  d  $3k \div 10$ g  $x \div y$  h  $12 \div g$

 $\frac{k}{4}$  is the same as  $k \div 4$ .

**Extension Activities** 

- 12 Marcela buys 7 plants from the local nursery.
  - **a** If the cost is \$10 for each plant, what is the total cost?
  - b If the cost is \$\alpha\$ for each plant, write an expression for the total cost in dollars.
  - c If the cost of each plant is decreased by \$3 during a sale, write an expression for:
    - i the new cost per plant in dollars
    - ii the new total cost in dollars of the 7 plants.
- 13 Francine earns \$p per week for her job. She works for 48 weeks each year. Write an expression for the amount she earns:
  - a in a fortnight
  - **b** in one year (of 48 weeks)
  - c in one year if her wage is increased by \$20 per week after she has already worked 30 weeks in the year.

# 🛖 DVD Dilemma –

- 14 Tom would like to purchase some DVDs of two television shows.
  - a Write an expression for the total cost of:
    - i 4 seasons of Numbers
    - ii 7 seasons of Proof by Induction
    - iii 5 seasons of both shows
    - iv all 7 seasons of both shows, if the final price is halved in a sale.
  - b If a is 20 and b is 30, how many DVDs could he buy for \$200?

Towels cost \$c each at a shop.

- **a** John buys 3 towels, Mary buys 6 towels and Naomi buys 4 towels. Write a fully simplified expression for the total amount spent on towels.
- On another occasion, Chris buys n towels, David buys twice as many as Chris and Edward buys 3 times as many as David. Write a simplified expression for the total amount they spent on towels.

- **a** Make a substitution to prove that 4a + 3b is not equivalent to 7ab.
- **b** Is 4a + 3b ever equal to 7ab? Try to find some values of a and b to make 4a + 3b = 7ab a true equation.
- **c** Is 4a + 3a ever not equal to 7a? Explain your answer.
