Fraction Frenzy

You need 🛮 a classmate 🗗 a photocopy of the fraction cards copymaster

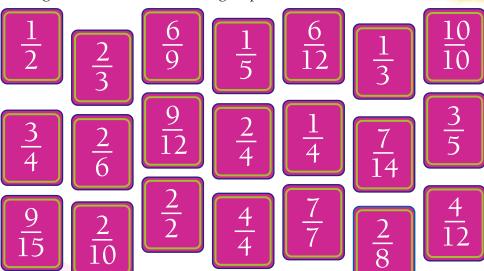

Activity

Karyn's class is working with fractions that look different but show the same amount. They are called equivalent fractions.

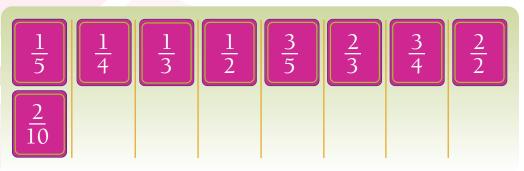

For example, $\frac{1}{2}$ an apple is the same as $\frac{2}{4}$ of an apple.

Karyn is sorting these fraction cards into groups:

She starts to put them in columns like this:

1. Using the same fraction cards as the ones in Karyn's pile, complete each column. Compare your columns with a classmate's. Discuss with your classmate why Karyn has put her first row of fractions in this particular order.

- b. $\frac{20}{60}$ c. $\frac{33}{99}$ f. $\frac{43}{86}$ g. $\frac{24}{96}$

- h.

- **b.** $\frac{3}{7}$
- c. $\frac{2}{3}$

| <u>1</u> 7 | | <u>1</u> | | | <u>1</u> | | 17 | | | | 1 7 | | <u>1</u> 7 | | | | <u>1</u> 7 | |
| 1/4 | <u>1</u> 14 | <u>1</u> | 1 | 4 1 | 1 4 | <u>1</u> 14 | 1/2 | - /4 | <u>1</u> | | <u>1</u> 14 | <u>1</u> 14 | <u>1</u> 14 | 1/4 | | <u>1</u> | 14 | |

- Give an example of two equivalent fractions and explain how you know they are equivalent.
- Complete these equivalent fraction equations:
 - **a.** $\frac{6}{9} = \frac{\square}{3}$ **b.** $\frac{6}{9} = \frac{\square}{99}$
- c. $\frac{6}{9} = \frac{\Box}{12}$
- Karyn has a fraction that is equivalent to $\frac{3}{8}$. It has 375 as its numerator (top number). What is its denominator (bottom number)?
