## Name:

By Liz Sneddon

## Investigative

## Process

The PPDAC cycle is the core of all statistical investigations.

## Plan

## Populations and samples

We start with an investigation question about a population. We often have a hypothesis or prediction of what we expect to find.

> A population is all the individual members or items that make up a group.

## A sample is a group of individuals (or items) selected from the population.

A census is a study that attempts to measure every unit in a population.

- The government collects data every 4 years.
- It helps the government, councils and businesses to plan for the future.
- The last census in 2013 cost over $\$ 100$ million dollars.
- It took more than 6 months to collect the data from every person in NZ (over 4.2 million people).

The government uses this information to help it decide things like:

- Where to build new schools (if there are a lot of young children in one area, they will need a school)
- How many hospitals do we need?
- Do families need more financial assistance?

The 2013 Census process

The district supervisor does a
Arther check

The data scanned from the paper forms and forms that are filled in forms and forms that are filled in online are

Census day is Tuesday, 5 March 2013. Everyone in your house fills in a census form.

If every member of your household completes their form online, the collector may not need to call back. Online forms are sent to a database at Statistics NZ.

All paper forms are sent to Auckland.

Marks, numbers, and text are converted into data. This information plus an image of the form goes to an operator to check that all the

Forms are unpacked from the Forms are unpacked from the
boxes and prepared for scanning.

The quality of the data is checked by comparing it to previous census by comparing it to previous ce
results and other official data.

The collector will collect paper forms in the 12 days after census day.

An image is taken of every form An image is taken of every fo
that has been completed.

The collector checks paper forms, numbers them, and places them in a box.

After scanning the paper forms are securely destroyed and recycled.

## Exercise:

1) Describe the population at your school. Think about ages, genders, ethnicities, etc.
2) Why do we usually take a sample rather than a census?
3) What does the government use the data collected from the census for? Explain.
4) A beverage company wanted to see if people in the United States liked their new logo. Which choice best represents a population?
A. A selection of logo artists.
B. Every person in the United States.
C. A selection of shoppers from different states.
D. 3,800 children age 5-15
5) A musician wanted to see what people who bought his last album thought about the songs. Which choice best represents a sample?
A. Every person who bought the album.
B. A selection of people who didn't want to buy the album.
C. 250 girls who bought the album.
D. A selection of 3,294 people who bought the album.
6) A gaming website wanted to find out which console its visitors owned. Which choice best represents a population?
A. Visitors to the 3DS section.
B. All of the website visitors.
C. Visitors to the PS4 section.
D. Visitors who are on the website for more than 5 minutes.
7) Before a nationwide election, a polling place was trying to see who would win. Which choice best represents a sample?
A. A selection of voters over age 50 .
B. A selection of male voters.
C. A selection of voters of different ages.
D. All voters

## Sampling methods

Data needs to be collected by taking a sample. The sample data will allow us to make estimates about the population without needing the time, money and effort to collect a census.

The sampling method is HOW we take a sample
 from the population.

Samples are selected randomly so the characteristics of the sample are typical (representative) of the population.

A random sample means that each member of the population has the same chance of being selected.

A biased sample is not typical of the population. It has a bias for particular members.

A representative sample is a group of people who have been selected randomly, so that there is a mix of characteristics in the sample that match the population.

Characteristics may include: a mix of genders, ethnicities, socio-economic status, eye colour, sporting preferences, etc.

## Example:

If I do a questionnaire with only blue eyed students, then I have a biased sample. This means I do not have any information about people with other coloured eyes (e.g. brown, green, grey, etc), so my data does not represent the population of all people, only the people with blue eyes.

## Exercise：

1）Go to the Stickland website
（https：／／learning．statistics－is－awesome．org／stickland／）．There is an animation running where people in the population are randomly selected to go across the screen（they have a random number on their shirt）．Take a random sample of 10 students（by clicking on 10 people）and record your data below．

|  |  | ON／SO人 ¿yooqәכе」 əлеч no人 og | Do you have Snapchat？ Yes／No |  | $\begin{gathered} \text { Do you have a Cellphone? } \\ \text { Yes / No } \end{gathered}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

2) Why is it important for our samples to be randomly selected?
3) A school has about 690 students. The school wants to do a survey on the use of phones by students. For the methods below, state if they are biased or representative samples, and explain why.
a) Interviewing all students in a Year 9 class.
b) Interviewing every 20th student leaving school at the end of the day.
c) Asking for 40 volunteers to fill in a questionnaire.
d) Interviewing 40 students at a sports game on Wednesday afternoon.

## Sample size

We want to take a big enough sample size, so that the results are reliable.

The image below talks about accuracy and precision.
In statistics we want to be accurate (we want our sample to be a close estimate of the population), and we want to be precise (when we collect data we want to control the variation as much as possible).

Accurate \&Precise

Accurate
\&Not Precise

Not Accurate \&Precise

Not Accurate \&Not Precise

## Exercise:

1) Circle the words that complete the sentences below.
a) Smaller sample sizes take a shorter / longer time to collect data, but are $\qquad$ more / less $\qquad$ reliable.
b) Larger sample sizes take a $\qquad$ shorter / longer $\qquad$ time to collect data, and are $\qquad$ more / less reliable.
2) Mrs Sneddon is going to survey 35 girls and 40 boys at a local primary school to investigate their use of ipads at home. Does it matter that there are a different number of girls and boys? Why / why not?

# Observational versus <br> Experimental studies 

We need to understand what methods we can use to collect data, what the different data types are and how to organise our data.

Data can either be from an observational study or an experimental study.

An observational study is where the population is observed without any interference by the investigation.

An experimental study is where the investigator randomly assigns people into one of two groups, controlling all other conditions.

## Data Collection Methods

Observational data can be collected in several different ways:

Observation
Questionnaire
Database

## Exercise:

A questionnaire or survey is one way to collect data. Complete the survey questions below.

| How old are you (in years)? | What is your gender? |
| :--- | :--- |
| - 12 | Male |
| - 13 | - Female |
| 14 |  |
| 15 |  |
| 16 |  |

| Which of the following devices do <br> you have? (Tick all that apply) | Which of the following social media platforms <br> do you use? (Tick all that apply.) |
| :--- | :--- |
| O Own cell phone | a Facebook |
| a Own computer or laptop | a Twitter |
| Family computer or laptop | Instagram |
| a None of the above | Snapchat |
|  | ane of the above |

For the last school day, estimate how many minutes you spent on the following:

| Computer time | TV time | Gaming time | Phone time |
| :---: | :---: | :---: | :---: |
|  |  |  |  |

Now fill in the following Google Form:

## http://bit.ly/Year9MediaSurvey

The data will be recorded automatically on a Google Sheet.

## Exercise:

Follow the instructions below to measure your handspan and right foot length.

## Instructions

For measuring foot length:

1) Collect a piece of paper, a pen and a ruler.
2) If you have shoes on, remove your right shoe.
3) Place the paper on the floor so it is flat.
4) Place your right foot on the paper.
5) Using the pen, draw a line at the back of your heel and at your longest toe.
6) Using your ruler, measure the distance (in
 cm ) from the heel to the longest toe.
7) Record this measurement here: $\qquad$

For measuring hand span:

1) Collect a piece of paper, a pen, and a ruler.
2) Put the piece of paper on a flat surface (e.g. a table)
3) Place your right hand flat on the paper, palm down.
4) Spread your fingers as wide as they can.
5) Using the pen, draw a line at the edge of your smallest finger and at the edge of your thumb.
6) Using your ruler, measure the distance (in cm )

Measure
 from the smallest finger to the thumb.
7) Record this measurement here: $\qquad$

Now enter the data into the spreadsheet (link below), so we can collect data from all the students in the class.

## http://bit.ly/HandSpan2021

## Exercise:

Look at the instructions for measuring the length of your foot and answer these questions.

1) Why would I ask you to remove your shoe? Explain.
2) Is your right foot the same length as your left foot? Can you explain why/why not?
(Hint: think about whether you are right or left handed and which side of your body would be stronger and used more)
3) Why should we take measurements from people with small and big feet? (E.g. young and older people).

## Instructions \& controlling sources of variation

When coming up with your plan, you need to think about how you can minimise the amount of variation - making sure that all the measurements are done in the same way.

Here are some things to think about:

| Step-by-step (01) |  |
| :---: | :---: |
| instructions to measure both | (02) |
| explanatory | (03) |
| and response variables | (04)) |

## Example:

When measuring foot length and handspan, some of the factors I will control are:

- Using the same measuring tape, so that all the measurements are consistent.
- Getting students to put their hand down on a piece of paper, so that their hand is as flat as possible. This will make the measurements consistent.
- Get students to take their shoe off when I measure the length of their foot, because the different shoes people wear could have a different end (e.g. pointed, flat, curved) which would change the measurements and not be an accurate measurement of the length of their foot.

## Exercise:

## Problem 1

I wonder if there is a relationship between a person's height and weight for students in your class?

## Plan

Write a detailed set of instructions of how you would measure a students height and weight, describe some sources of variation that you will control and explain how you will control them.

## Variable 1: Height

$\qquad$
Variable 2: Weight

## Instructions:

Controlling sources of variation:

## Problem 2

I wonder if girls' hair tends to be longer than boys' hair, for students in our class?

## Plan

Write a detailed set of instructions of how you would measure gender and hair length, describe some sources of variation that you will control and explain how you will control them.

Variable 1: Gender
Variable 2: Hair length

## Instructions:

Controlling sources of variation:

## Data

## Variables and Data

A variable describes a characteristic of an individual from the population. The characteristic changes or varies from one individual to another.

Data is collected when the values of variables are
 recorded for individuals.

## Example:

Here is a spreadsheet that collected fitness information from students:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |

Each row is a set of data belonging to a student.
Each column is a variable.
In this example there are 6 variables:

- Students first name,
- Age,
- Gender,
- Whether they take PE this year,
- Wall sit time, and
- Height.

## Exercise:

Name the variables for the data you collected a sample from previously.

1) Stickland dataset

|  | $\begin{aligned} & \text { n } \\ & \stackrel{n}{0} \\ & 0 \\ & \\ & 0 \\ & 0 \\ & 0 \end{aligned}$ | $\begin{gathered} \text { Do you have Facebook? } \\ \text { Yes / No } \end{gathered}$ | $\begin{gathered} \text { on / seд } \\ \text { ¿łeyodeus əлey no人 od } \end{gathered}$ |  | $\begin{gathered} \text { Do you have a Cellphone? } \\ \text { Yes / No } \end{gathered}$ | $\begin{aligned} & \text { Reading time yesterday } \\ & \text { (hours) } \end{aligned}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| KATIE | 10 | 1.5 | no | no | no | 1.25 | 1.5 |
| EMILY | 12 | yes | no | 3.2 | yes | 0.75 | 2 |

## Variables:

2) The Social Media survey:

| Age | Gender | Devices | Social Media |  | $\begin{aligned} & \underset{1}{E} \\ & \underset{Z}{Z} \end{aligned}$ | U E O O E E C | $\begin{aligned} & \text { © } \\ & \underset{\sim}{E} \\ & \text { 0 } \\ & \frac{1}{0} \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{cc} \text { a } & 12 \\ \text { a } & 13 \\ 0 & 14 \\ \square & 15 \\ \square & 16 \end{array}$ | - Male <br> - Female | - Own cell phone <br> - Own computer or laptop <br> - Family computer or laptop <br> - None of the above | - Facebook <br> - Twitter <br> - Instagram <br> - Snapchat <br> - None of the above |  |  |  |  |

## Variables:

## Data Types

Categorical (groups) variables are characteristics, that cannot be described by numbers e.g. gender, ethnicity, apple variety. They can also be called qualitative variables.

Numerical (numbers) variables are characteristics described by numbers e.g. height, age, number of apples, weight. Numerical variables are either discrete or continuous. They can also be called quantitative variables.

- Discrete variables (whole numbers), values obtained by counting.
- Continuous variables (measurement), values obtained by measuring.

## Example:

Here is the Wall sit spreadsheet:

|  | Students First Name | Age | Gender | Taking PE this year? | Wall sit time (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Jessie | 17 | Female | No | 114 | 161 |
|  | Caleb | 18 | Male | Yes | 640 | 185 |
| Data type | $\begin{aligned} & \overline{0} \\ & \text { U } \\ & \text { O} \\ & \text { N } \\ & \text { U } \end{aligned}$ |  | $\overline{0}$ 음 O U U | $\overline{0}$ 음 O U |  |  |

## Exercise:

1) Name the data types for the Stickland spreadsheet:

|  |  |  | Do you have Snapchat? Yes / No |  |  | $\begin{aligned} & \text { Reading time yesterday } \\ & \text { (hours) } \end{aligned}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |

2) Social Media dataset

| Age | Gender | Devices | Social Media |  | E $\underset{\sim}{\boldsymbol{E}}=$ $\gtrless$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |

3) Hand span and Foot length dataset

| Gender | Right or left handed | Foot length (cm) | Hand span (cm) |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |

## Cleaning data

Look for the following issues:

- Data entry mistakes
- Incorrect units

- Missing data

But, you CANNOT change/delete data unless you KNOW that it is a mistake. If you are CERTAIN the data is wrong, then make the cell blank (or enter a 0 ).

## Exercise:

Find any data that doesn't make sense and highlight the values. State what corrections or changes you would make.

| $\begin{aligned} & \text { L } \\ & \text { D } \\ & \text { C } \\ & 0 \\ & 0 \end{aligned}$ | $$ |  | $\boldsymbol{y}$ 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| girl | 14 | Russia | 1 | 149 | 220 | 115 | 5 |
| boy | 11 | NZ | 1 | 141 | 22 | 142 | 65 |
| girl | 14 | NZ | 2 | 175 | 255 | 176 | 81 |
| girl | 13 | NZ | 1 | 162 | 25 | 64 | 80 |
| girl | 1 | NZ | 1 | 158 | 25 | 163 | 97 |
| girl | 12 | NZ | 1 | 164 | 28 | 1 | 80 |
|  | 13 | NZ | 2 | 166 | 26 | 180 | 100 |
| girl | 12 | cookisl | 1 | 154 | 23 | 156 | 49 |
| girl | 14 | NZ | -1 | 170 | 26 | 1 | 70 |
| girl | 12 | India | 1 | 0 | 21 | 153 | 8 |

Corrections / changes

## Data displays

Here are some common ways to display data.

| Tally chart |  | Frequency table |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Pet | Tally Marks | Shoes We Wear |  |  |
|  | HHt HHt | Shoes | Tally | Total |
|  |  | $2$ | H H $^{\text {l }}$ | 5 |
|  | III | 784 | III | 3 |
|  | HHTI | (8) | IIII | 4 |
| Pictogram |  | Stem and leaf |  |  |
| MondayTuesdayWednesdayThursdayFridaySaturdaySunday |  | Race Runni <br> Stem $12$ $13$ $14$ $15$ <br> 16 <br> 18 | Times in Se <br> Leaves <br> 26 <br> 025 <br> 1246 <br> 2378 <br> 12468 <br> 578 <br> 13 <br> Key: | 2 seconds |

Let's look at these in more detail, so that you know how to make them.

## Tally chart \& Frequency table

Tally charts and frequency tables are useful when you want to summarise data into categories (e.g. groups or word answers)

## Example:

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

Tally chart

| Gender | Tally marks |
| :---: | :---: |
| Female | 111 |
| Male | 11 |

Frequency table

| Gender | Tally marks | Frequency |
| :---: | :---: | :---: |
| Female | 111 | 3 |
| Male | 11 | 2 |

## Exercise:

1) Using the Wall sit data above, make a tally chart and frequency table of the PE variable.

| PE | Tally marks | Frequency |
| :---: | :--- | :--- |
|  |  |  |
|  |  |  |

2) Using the Stickland data given below, make a tally chart and frequency table of each categorical variable (Facebook, Snapchat and Cellphone).

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

|  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Pictogram

Pictograms use pictures to represent data. You need to have a key/legend to state how many units each picture represents.

## Example:

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

Pictogram of the PE variable

## Exercise:

1) Using the Wall sit data above, make a pictogram of the Gender variable.

2) Using the Stickland data given below, make a pictogram for each categorical variable (Facebook, Snapchat and Cellphone).

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

## Stem and leaf

A stem and leaf is a way to summarise a lot of numeric data in a graphical type format. It works well when you don't have too much data.

A key is necessary.
Each piece of data is split into a stem part and a leaf part. The leaf part will only have 1 digit in it, and the rest of the number goes into the stem.

Then you put the data in order with the smallest number on the left of the leaf.

Race Running Times in Seconds

Stem
12 13 14 15 16 17 18

Leaves
26
025
1246
2378
12468
578
13

Key: $14 \mid 2=14.2$ seconds

## Example:

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

Stem and leaf of height variable
E.g. split 161 into a stem of 16 | 1
15 5

16
19
17
$18 \quad 25$
Key: 15 | $5=155 \mathrm{~cm}$

## Exercise:

Make stem and leaf plots of the data in each question below.

1) $25,28,30,31,33,35,37,38,37,40,41,42,42,43,45,45,47$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

2) $12,18,22,24,29,31,37,39,42,45,49,52,57,60,62,64,66,71,73,75$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

3) $255,258,262,262,267,268,269,271,276,281,293,295,301,307$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

4) $402,458,461,465,466,468,468,472,473,474,475,478,479,482,491$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

5) $1.4,1.6,1.8,1.9,2.1,2.2,2.4,2.6,2.9,3.1,3.4,3.5,3.7,4.1,4.3$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

6) $1.35,1.37,1.39,1.42,1.45,1.46,1.46,1.48,1.51,1.52,1.57,1.60$

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

## Graphs

Here are some common ways to graph data.

| Bar graph (categorical or discrete data) | Histogram (continuous data) |
| :---: | :---: |
| Student survey - favourite fruits |  |
| Dot plot (numerical data) | Box plot (or Box and whisker) (numerical data) |
| $\begin{array}{rrr} : & : & \vdots \\ \vdots & : & : \\ \vdots & : & : \\ \hline \end{array}$ |  |
| Scatter Graph (two numerical variables) | Time series graph (one numerical variable and one variable about time) |
|  | Timber production |

Let's look at these in more detail, so that you know how to draw them by hand and on the computer.

## Exercise:

For each of the graphs below, state what type of graph it is.

| Number of eggs laid | Graph type: |
| :---: | :---: |
| $\begin{array}{lllllll}2 & 4 & 6 & 8 & 10 & 12\end{array}$ |  |
|  | Graph type: |
|  | Graph type: |
|  | Graph type: |
|  | Graph type: |
| Actual weights of male university students (kg) ```\| | 1577 | | 0000002223557889 | 00012233455 | | 00344589999 | | 008 10 | 0009 11 | 12 | 0``` <br> The stem unit is 10 kg | Graph type: |

## Bar graphs

You need your data in a frequency table, and you can draw bar graphs either from categorical data (groups) or discrete data (counting numbers).

When drawing bar graphs, you need to make sure that the bars DO NOT touch

Student survey - favourite fruits
 each other. This is because the data is not connected to each other.

## Example:

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

First make a Frequency table of the Gender variable, then make a Bar graph

| Gender | Frequency |
| :---: | :---: |
| Female | 3 |
| Male | 2 |

## Exercise:

1) Using the Wall sit data above, make a bar graph of the PE variable.

Frequency table

| PE | Frequency |
| :---: | :---: |
| Yes |  |
| No |  |

Bar graph

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

2) Using the Stickland data given below, make a bar graph for each categorical variable (Facebook, Snapchat, and Cellphone).

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

Frequency table

| Facebook | Frequency |
| :--- | :--- |
|  |  |
|  |  |

Bar graph

| Cellphone | Frequency |
| :--- | :--- |
|  |  |
|  |  |

## Histogram

You can draw histograms with continuous data (measurements).

You usually need to make a frequency table where you group the data into ranges first.

When drawing histograms, you need to make sure that the bars DO touch each other. This is because the data is continuous.

## Example:

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

Frequency table

| Wall sit time <br> (seconds) | Frequency |
| :---: | :---: |
| $0-199$ | 1 |
| $200-399$ | 2 |
| $400-599$ | 1 |
| $600-799$ | 1 |

Histogram

## Exercise:

1) Using the Wall sit data above, make a histogram of the Height variable.

Frequency table

| Height (cm) | Frequency |
| :---: | :---: |
| $150-159$ |  |
| $160-169$ |  |
| $170-179$ |  |
| $180-189$ |  |

Histogram

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

2) Using the Stickland data given below, make a histogram for each continuous variable (Age, Bag weight, Reading time and TV time).

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

Frequency table

| Age | Frequency |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

| Bagweight | Frequency |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

| Reading <br> time | Frequency |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

| Tv time | Frequency |
| :---: | :---: |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

|  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Dot plot \& Box plot (Box and whisker)

Both of these graphs are for Numeric data.

Dot plots
A dot plot plots every data point, and the box plot (sometimes called a box and whisker plot) is a summary of the data.

Later in this workbook we will show you how to find the summary statistics needed for the box plot.

Box plots

For now, we will give you these values and we want you to focus on how to draw the graph.

## Example:

Draw a dot plot with the following data: $1,3,4,6,8,9,4,6,7$
Then draw a box plot with the following data:

- Minimum $=1$
- $\mathrm{LQ}=3.5$
- Median $=6$
- $\mathrm{UQ}=7.5$
- Maximum $=9$

It's very helpful when we want to analyse the data later to have the dot plot and box box plot stacked on top of each other like this example.

## Exercise:

1) Using the Stickland data given below, make a dot plot and box plot for each numerical variable (Age, Bag weight, Reading time and TV time).

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

2) Draw a dot plot of the Age variable. Then add a box plot using the summary data below.

- Minimum $=6$
- $\mathrm{LQ}=8$
- Median $=10.5$
- $U Q=14$
- Maximum = 16

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  | \| |  |  |  | $\qquad$ |  |  |  | \| |  |  |  |
|  |  |  |  |  | \| |  |  |  |  |  |  |  |  |  |  |  |  |  |

3) Draw a dot plot of the Bag weight variable. Then add a box plot using the summary data below.

- Minimum $=1$
- $\mathrm{LQ}=2.4$
- Median $=3.95$
- $\mathrm{UQ}=5$
- Maximum $=5.8$

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  | $\qquad$ | $\qquad$ |  |  |  |  |  |  |  |  |  |

4) Draw a dot plot of the Reading time variable. Then add a box plot using the summary data below.

- Minimum $=0$
- $\mathrm{LQ}=0$
- Median $=0.125$
- $\mathrm{UQ}=0.25$
- Maximum $=3.25$

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  | $\mid$ |  |  |  |  |  |  |  |  |  |  |  |  |  |

5) Draw a dot plot of the TV time variable. Then add a box plot using the summary data below.

- Minimum $=0$
- $\mathrm{LQ}=0.25$
- Median $=1.25$
- $\mathrm{UQ}=3$
- Maximum $=4.25$

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Scatter graph

The scatter graph looks to see if there is a relationship between two numeric variables.

## Example:

Explanatory

Here is a sample of students from the Wall sit spreadsheet:

| Students <br> First Name | Age | Gender | Taking PE <br> this year? | Wall sit time <br> (seconds) | Height (cm) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jessie | 17 | Female | No | 114 | 161 |
| Caleb | 18 | Male | Yes | 640 | 185 |
| Amisha | 16 | Female | No | 352 | 155 |
| Alena | 18 | Female | Yes | 238 | 169 |
| Luke | 17 | Male | Yes | 421 | 182 |

Draw a scatter graph of the Age and Wall sit variables.

## Wall sit Investigation

## Exercise:

1) Using the Wall sit data above, make a scatter graph of the age and height variables.

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

2) Using the Wall sit data above, make a scatter graph of the height and wall sit variables.

3) Using the Stickland data given below, choose two numeric variables and make a scatter graph.

| Age | Facebook | Snapchat | Bag <br> weight | Cellphone | Reading <br> time | TV time |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | no | yes | 5 | yes | 0.25 | 4.25 |
| 13 | no | no | 5.8 | yes | 1 | 0.25 |
| 8 | yes | yes | 2.4 | yes | 0 | 0 |
| 14 | yes | yes | 1.1 | yes | 0 | 0 |
| 16 | yes | yes | 4.1 | yes | 0 | 2 |
| 6 | yes | no | 1 | yes | 3.25 | 3 |
| 11 | yes | yes | 3 | yes | 0 | 1 |
| 10 | yes | no | 3 | yes | 0.25 | 1 |
| 14 | no | no | 5 | yes | 0 | 1.5 |
| 10 | no | no | 3.7 | no | 0.25 | 3 |

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Time series graph

Time series graphs are about data that has been collected over time.

We put the time on the horizontal (x) axis. Time can be measured in minutes, hours, days, weeks, months or years.

The vertical axis must be a numerical variable.

Time

## Example:

Here is data on attendance at a school over one week. Draw a time series graph.

| Weekday | No. of students <br> attending |
| :--- | :---: |
| Monday | 600 |
| Tuesday | 610 |
| Wednesday | 672 |
| Thursday | 688 |
| Friday | 608 |

## Exercise:

1) Using the data below about the number of cars sold at a car yard, make a time series graph.

| Year | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales | 68 | 60 | 64 | 64 | 58 | 54 | 68 | 58 | 60 | 68 |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

2) Using the data below on the number of phones sold per week at a phone store, make a time series graph.

| Week | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Phone <br> Sales | 174 | 183 | 147 | 174 | 134 | 156 | 151 | 138 | 147 | 129 | 138 | 116 |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

3) Using the data below on the number of text messages sent per day, make a time series graph.

| Day | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Text <br> messages | 52 | 63 | 52 | 59 | 74 | 82 | 93 | 77 | 84 | 104 | 92 | 113 |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

4) Using the data below on the profit (in thousands of dollars) for a company over the last 11 years, make a time series graph.

| Year | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Profit <br> $\mathbf{( \$ 0 0 0 ' s )}$ | 50 | 36 | 43 | 44.5 | 39 | 37.5 | 33.5 | 38 | 42 | 41.5 | 32.5 |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | $\rceil$ |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## NZGrapher

Pairs plots are useful as it gives an overview of the dataset, the variables, and the comparative graphs. If you click on any of the graphs, it will take you to that graph.

## Exercise:

For this exercise, you will use the Kiwi dataset in NZGrapher. Here are the variables.

| Variable | Description |  |
| :--- | :--- | :--- |
| Species | GS-Great Spotted <br> NIBr-North Island Brown <br> Tok-Southern Tokoeka |  |
| Gender | M-Male <br> F-Female |  |
| Weight(kg) | The weight of the kiwi bird in kg |  |
| Height(cm) | The height of the kiwi bird in cm |  |
| Location | NWN-North West Nelson <br> CW-Central Westland <br> EC-Eastern Canterbury <br> StI-Stewart Island <br> NF-North Fiordland | SF-South Fiordland <br> N-Northland <br> E-East North Island <br> W-West North Island |

1) Go to NZGrapher and select the Kiwi dataset.
2) Look at the data on the left hand side. Find point number 20 and 40, and write their data values in the table below.

| Data <br> point | Species | Gender | Weight | Height | Location |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 20 |  |  |  |  |  |
| 40 |  |  |  |  |  |

3) Make 2 bar graphs, one with the variable Species, and one with the variable Location. Add to your graph a title, and summary statistics.

Copy the graphs (move the mouse over the image and right click, select copy) and paste them both into a Word document.
4) Make 2 histograms, one with the variable Weight, and one with the variable Height. Add to your graph a title, units onto the axis label and summary statistics.

Copy and paste the graphs into your Word document.
5) Make a pie chart and a donut graph with the variable Gender. Add to your graph a title, and summary statistics.
Copy and paste the graphs into your Word document.
6) Make a dot and box plot with the variable Weight. Add to your graph a title, units on the horizontal axis, a High box plot and summary statistics.
Copy and paste the graphs into your Word document.
Repeat this with the variable Height.
7) Make a scatter graph with the variables Height and Weight. Add to your graph a title, and a label (with units) on both the horizontal and vertical axis).
Copy and paste the graphs into your Word document.
Then add a regression line and copy this into the box below also.
8) Select the dataset TS - Sunglasses.csv.

Create a Time Series graph of the variables Quarter and Sales and add a title Copy and paste the graphs into your Word document.

## Summary Statistics

Numbers calculated from a sample of numerical values that are used to summarise the sample. The statistics will usually include at least one measure of center and at least one measure of spread.

## Measures of Center

There are 3 measures of center:

- Mean $=\frac{\text { add up all the values }}{\text { the number of data values }}$
- Median $=$ the number in the middle (when the data is in order)
- Mode $=$ the most common number

## Example:

Estimate the center, and find the mean,
median and mode.

Data: 9, 3, 1, 8, 3, 6

Mean $=\frac{9+3+1+8+3+6}{6}=5$
Center

Median
Put the numbers in order: $1,3,3,6,8,9$
Find the number(s) in the middle: 1, 3, $3,6,8,9$
Find the median $=\frac{3+6}{2}=4.5$
Mode $=3$

## Exercises:

| Estimate center on the graph. | Calculate the Mean, Median, and Mode |
| :---: | :---: |
| Data: 4, 6, 3, 8, 2, 4, 9 |  |
| $\begin{array}{rrrrrr}\text { Data: } & 4.4 & 4.7 & 3.5 & 2.2 & 4.2 \\ 2.9 & 4.4 & 1.5 & 2.0 & 3.3 & \end{array}$ |  |
| Data: 25, 35, 37, 36, 28, 29, 36, 26, 22 |  |
| Data: \$150, \$145, \$135, \$150, \$148, \$156, \$143 |  |

## Measures of Spread

## Spread

## Spread

A measure of spread looks at how precise or accurate the data is. There are two measures you will use:

- Range $=$ Maximum - Minimum
- $\operatorname{IQR}$ (InterQuartile Range) $=\mathrm{UQ}-\mathrm{LQ}$
where $\mathrm{UQ}=$ Upper Quartile $=$ the number where one quarter of the data lies above it (find the median, then find the middle of the numbers above the median, this is the UQ),
and $\mathrm{LQ}=$ Lower Quartile $=$ the number where one quarter of the data lies below it (find the median, then find the middle of the numbers below the median, this is the LQ).

## Example:

Show the spread on the graph, and find the range and IQR.

Range $=$ 9-1 = 8
IQR
Put the data in order: $1,3,3,6,8,9$
Find where the median is: $1,3,3 \mid 6,8,9$
Find the LQ (the median of numbers below the median), the median of $1,3,3$

$$
L Q=3
$$

Find the UQ (the median of numbers above the median), the median of $6,8,9$

$$
\begin{aligned}
& U Q=8 \\
& I Q R=U Q-L Q=8-3=5
\end{aligned}
$$

## Exercises:

| Show the spread on the graph. | Calculate the Range and Interquartile Range |
| :---: | :---: |
| Data: 4, 6, 3, 8, 2, 4, 9 |  |
| $\begin{array}{lllllll}\text { Data: } & 4.4 & 4.7 & 3.5 & 2.2 & 4.2 & 6.7 \\ 2.9 & 4.4 & 1.5 & 2.0 & 3.3 & \end{array}$ |  |
| Data: 25, 35, 37, 36, 28, 29, 36, 26, 22 |  |
| Data: \$150, \$145, \$135, \$150, \$148, \$156, \$143 |  |
